ELDERLY CARE

What is the Aged Care Program?

With the Geriatric (advanced age) Care Technician Program; In the world and in our country, the development of medicine and technology has enabled individuals to become more conscious about health and their life expectancy is prolonged. As in many countries, there is an increase in the elderly population as well as the young population in our country. Increasing elderly population also reveals many problems that need to be solved.

Increasingly, the deterioration of the traditional structure, the return to the nuclear family, reveals the problem of the elderly being alone. Physiological and psychological changes brought about by aging and the difficulty of staying with the elderly with their families increase their care needs. The prolongation of life expectancy and the increase in the care needs of the elderly create the need for professional intermediate staff who will carry out the care services one-to-one in practice.

ELDERLY CARE

- **Employment Areas of Graduates:** The graduates of the program receive the title of “Elderly Care Technician”. Graduates; They can work under the supervision of experts in the departments related to the fields of the Ministry of Family and Social Policies, where elderly care services are carried out, municipalities, hospitals, nursing homes, elderly care homes, practices for the elderly in health units, palliative care units, home care services, arranging the elderly's home, protected residences.

CHILD DEVELOPMENT

What is Child Development Department?

Child Development Department is an academic discipline that deals with the psychological, biological and emotional evolution of human beings from birth to the end of adolescence. During development, the individual human progresses from dependency to increased autonomy. Although it seems like an easy process in terms of predictability, it may differ for each child. It does not progress at the same rate, and each stage is influenced by previous developmental experiences. Genetics and prenatal development often form part of the study of child development, given that genetic factors and events in prenatal life strongly influence developmental changes.

CHILD DEVELOPMENT
